Marbella, 8<sup>th</sup> December 1997

Dear Mr. Sarvela,

In 1995, we installed "The stark Boatwasher" in Puerto Banús in Marbella, Spain. It was hooked up on two shafts to the harbour wall. Although it was a simple installation, it proved to be very efficient.

During three seasons we have washed approximately 2000 boats with lengths that varied from 4 metres to 12 metres. There have been no problems with the machine and it has no significant wear or tear on brushes or shafts. We are totally satisfied with this performance and we can certainly recommend "Starkmatic" to any customer as being a very reliable machine.

We wish you all the best for the future.

Yours sincerely,

GÖKAN SUNDBERG

#### Comments and thoughts about The Stark Boatwasher

As entrepreneur dealing with marine activities I have been operating with The Stark Boatwasher for two years in the Stockholm area, mainly in Täby community. The machine does not show any weariness or tearing so far. Not even after being in salt-water all boating seasons in ;1995 (when the KEM Efficiency Test was made); 1996 (Täby) ;1997 (Täby), and being carried too and transported from several marinas, bridges and boatclubs on shore as well as off shore !

- \* The machine works perfectly and is easy to handel.
- \* The metod to wash boats in the water with rotating brushes, approximately 3 - 4 times per season is very effectiv (no need for toxic paints).
- \* High capacity, a boat with 5 - 6 metres in length is washed in about 7 minutes.
- \* Low investments, service and maintenance costs.
- \* A good opportunity for high incomes towards invested time and capital.
- \* A steady growing market with satisfied customers.

Best regards

Bo Sandelius
